Downtown Surveying Begins

New Braunfels, Texas — In conjunction with the City of New Braunfels Downtown Pedestrian Mobility and Safety Plan, a local surveying company will begin surveying property boundaries to determine the extent of public right-of-way the first week in April.

A Downtown Implementation Plan was developed in 2010 to guide policy and funding decision making for the City, development community and other stakeholders in order to spur economic development projects in downtown New Braunfels.

The plan recommended a variety of physical improvements such as:

- Creating continuity in the sidewalk system by repairing broken or constructing missing sidewalk segments
- Improving crosswalks around Main Plaza
- Retrofitting sidewalks to adhere to the Americans with Disabilities Act requirements to allow access by all types of users

The firm of Baker-Aicklen is leading the planning and engineering efforts to create construction documents to make these improvements. This phase of survey and construction plans will only address properties with addresses on the following streets:

- South Seguin Avenue between Main Plaza and Garden Street
- North Seguin Avenue from Main Plaza to the Landa Street railroad underpass
- Main Plaza
- West San Antonio Street from Clemens Avenue to Main Plaza
- East San Antonio Street to the San Antonio Street Bridge (over the Comal River)
- East San Antonio Street from the San Antonio Street Bridge to South Union Avenue

For additional information on the project, contact Monique Vernon, the City's Downtown Development Coordinator at (830) 221-4091.
