The Dry Comal Hike and Bike Trail winds through several different vegetation habitats: a savanna with prickly pear cacti and mesquite trees, an upland forest of old live oaks, Ashe juniper, cedar elm and a riparian habitat including boxelder, hackberry, willow and pecan trees. Established in 2003 by the Parks and Recreation Department and volunteer groups, the trail offers great recreation and wildlife viewing opportunities.

CAUTION: THIS IS A NATURAL AREA, BEWARE OF
- Unseen Surfaces
- Slick Rocks
- Tree Limbs
- Lightning
- Flash Flooding
- Snakes, Bees, Wasps & Mosquitoes

Help protect all natural features and habitat. Please do not collect, disturb, or injure plants, rocks, or animals.
